

LiquaSan LD200 - Preparation & Set Up

1. Open foil pouch at notch and remove blue LiquaSan packet. (DO NOT USE SCISSORS & NEVER OPEN BLUE PACKET).
2. To make stock solution, place packet in 2 gallons of cold water. Put container out of sunlight and let sit for a minimum of 4 hours or overnight. Gently stir or swish briefly until water is a yellowish-gold color. DO NOT SHAKE CONTAINER AS IT WILL SEPARATE THE GAS FROM THE LIQUID.
3. Thoroughly clean area to be treated of debris.
4. Based on your application use following dilution rates:

Disinfection/Deodorization:

Stock solution – 200ppm – Contact time min.10 minutes before wiping or let air dry

Mopping all floors:

1-part stock solution to 3 parts cold water

Treatment

1. Prior to application open doors and windows for proper ventilation (ALWAYS WORK IN A WELL-VENTILATED AREA).
2. For all floors mop or sponge and allow to air dry.
3. For cleaning bathroom & other hard surfaces: use a sprayer bottle to apply LiquaSan to surface to be treated then wipe all surfaces to spread evenly and **allow to air dry.**
4. For all other hard surfaces apply with commercial cold-water fogger or hand-held pump sprayer and allow to air dry.

Air-Out

1. Maintain a well-ventilated space and allow for a drying period. Use a fan to accelerate drying time if necessary

CLEAN UP & STORAGE

1. If using sprayer during application, release pressure and carefully pour the remaining solution into a solid color plastic container with a lid. Never store in the sprayer!
2. Be sure to rinse your applicator with clean water.
3. Dispose of spent packet in an outdoor refuse container or composter as the packet is compostable.
4. Any unused solution can be stored for up to 4-6 weeks in a cool, dark location.

SOLUTION DISPOSAL

1. Place the solution in sunlight without a lid until it becomes clear. The solution is now diffused & can be safely discarded.
